

Case 01234567

Request for Vendor Confirmation – CVE-2026-25749 Impact on RHEL 8.10 (Vim)

Product	Red Hat Enterprise Linux 8.10	Status	Waiting on Customer
Created By	Good Luck Infra	Severity	3 (Normal)
Account	1234567	Phone	+65 9876-5432

Description

Describe your problem. Include specific actions and error messages.

Dear Red Hat Support Team,

We would like to seek clarification regarding CVE-2026-25749, which has been reported as affecting the vim package.

Our infrastructure is currently running Red Hat Enterprise Linux 8.10, and the vulnerability has been flagged during our

security scan. Based on the Red Hat CVE advisory, the issue appears to affect RHEL 8; however, we could not find any

Red Hat Security Errata (RHSA) or patch released for this vulnerability at this time.

We would appreciate your confirmation on the following points:

Whether CVE-2026-25749 affects the vim package shipped with RHEL 8.10.

Whether Red Hat plans to release a fix or security errata for this CVE.

If there is any recommended mitigation or workaround until an official patch is available.

For your reference, we have attached the installed vim package version details from our RHEL 8.10 servers.

This confirmation will help us proceed with our internal risk management (RA) process until an official fix becomes available.

Looking forward to your clarification.

1 of 9

Business Impact

This vulnerability (CVE-2026-25749) was identified during a routine security vulnerability scan on our RHEL 8.10 servers.

The finding affects the vim package. Currently, there is no Red Hat security errata or patch available. We require confirmation from Red Hat regarding the impact and remediation plan in order to proceed with our internal risk acceptance (RA) and vulnerability management process.

Hello Team,

Thank you for contacting Red Hat technical support. My name is Shital and I will be assisting you with this case.

while going through the case description, I understand that you have queries related to CVE-2026-25749.

For CVE-2026-25749

=====

Red Hat Enterprise Linux 8 vim Affected None <<-----

This CVE marked as Affected for RHEL 8. The term "Affected" means that our Analysis team has determined that this product, such as Red Hat Enterprise Linux 8 is affected by this vulnerability and a fix may be released to address this issue in the near future. This includes all minor releases of this product unless noted otherwise in the Statement text.

You can refer below article for more information:

>> Answering to your queries:

1) Whether CVE-2026-25749 affects the vim package shipped with RHEL 8.10.

--> Yes, Red Hat has marked the RHEL 8 vim package as Affected.

2) Whether Red Hat plans to release a fix or security errata for this CVE.

--> Since the current classification is Affected, the expectation is:

- Red Hat will publish an RHSA once a fix is ready

- If the engineering team determines that the issue cannot be exploited in the RHEL context, the state may change to Not Affected.

There is no fixed/tentative timeline has been shared by our engineering team for the release of

<https://access.redhat.com/security/cve/cve-2026-25749>

3 of 9

fixes.

Please note, Red Hat is unable to provide a release date or estimated release dates for any security related errata. In some exceptions we may be able to provide a general quarter of the year estimate toward if or when a Feature Request (RFE), JIRA or Bugzilla will be released (not guaranteed). We cannot discuss if a fix will be released this week, month, in the next few months, etc. due to the dynamic process of creating patches and quality assurance testing.

What is the timeline for Red Hat Bugzilla support cases?

The timeline for Bug (BZ) and Feature Request (RFE) cases do not adhere to the standard support response time outlined in:

The time frames provided at this link are specific to active support cases. Update intervals for Red Hat bug cases can range from a few days to several months based on the severity and complexity of the issue.

3) If there is any recommended mitigation or workaround until an official patch is available.

--> --> Mitigation for this issue is either not available or the currently available options do not meet the Red Hat Product Security criteria comprising ease of use and deployment, applicability to widespread installation base, or stability.

Hope this help. Let me know if you have any other query.

Thanks & regards,

John Doe
